KAVINDU NETHSARA

SUMMARY

I am a passionate 18 year old Web Developer, Game Developer, and Tech Innovator with hands-on experience in multiple programming languages and emerging technologies. I enjoy building creative projects that combine software, hardware, AI, and interactive experiences.

EXPERIENCE

Web development projects

Self-made projects

• Built small static websites during 2022–2023.

• Developed dynamic websites, including:

ProjectBeat — https://projectbeat.netlify.app
GameWave — https://gamewave.netlify.app
APISwitch — https://apiswitch.netlify.app
Techop — https://techop.netlify.app

Embedded system projects

Self-made projects

• Fuellogix Boards V1

I developed a digital fuel metering system for fuel dispensing pumps that traditionally rely on mechanical meters. With my father's support, I successfully installed these digital fuel meters in multiple fuel dispensing setups, generating over LKR 700,000 in revenue through installation and deployment.

• ESP32-based AI assistant

I developed an ESP32-based AI assistant with VGA functionality. Using the FabGL library, it can connect to a VGA screen to display outputs. Further details are available in my portfolio.

• IoT-based CCTV security system

A compact IoT-based CCTV system with real-time image capture, wireless transmission, and decoding for live monitoring, motion alerts, and advanced features

Game development

Self-made projects

• The Rings Chapter 1 — horror game (https://nethgame.itch.io/the-rings)
• Knight Fight — a 2D platformer
• Madness Ball — a simple 3D game

Android Developer

Self-made projects

• Booklet Android app

To solve the problem of accidentally buying duplicate books at the BMICH book fair, I developed a native Android application using Kotlin. The app integrates Back4App as a cloud database to manage my personal library. Its ISBN search feature lets me cross-reference book barcodes against my database and avoid duplicate purchases.

Machine learning projects
(mini project - coursework)

• Digit Classification Using Deep Neural Network (DNN) with Keras
• Predicting Sales Using Simple Linear Regression
• Loan Approval Prediction: EDA & Machine Learning Models
• Boston House Price Prediction (Random Forest)

EDUCATION AND TRAINING

O/L — A7, B2, (2024) St. Mary's College, Negombo

A/L — Technology Stream, (2026) St. Maris Stella College, Thimbirigaskatuwa

Completed the Arduino Advanced Course and the Artificial Intelligence Intermediate Course at the Academy of Future Robotics, achieving an A+ grade in both.

CONTACT

Address: 83/1 Dungalpitiya , Negombo
Phone: 0770594975
Email: nethsarak2008@gmail.com

SKILLS

• Object-oriented programming
• C/C++
•Firebase Authentication, Firestore, Realtime Database, Storage
• Supabase and REST API integration
• Machine learning (Keras, scikit-learn , PyTorch fundamentals)
• Python, Django
• Web development (HTML, CSS, JavaScript, Tailwind CSS)
• Android app development (Kotlin)
• Software development
• Game development (Unity 2D/3D)
• Embedded systems (Arduino, Raspberry Pi mini-projects, ESP32)
• Speech/audio integrations and hardware prototyping
